

I want a program that will allow me generate an outfit for someone based on their mood, where they are going, and the temperature.

- 1. Ask user their name
- 2. Greet user with their name
- 3. Find out the temperature
- 4.Find out the user's mood
- 5. Find out where the user might be wearing the outfit to
- 6. Generate the outfit.
- 7. Ask user's opinion on the generated outfit
- 8. Try again if user doesn't like the generated outfit
